MAYA C. UMEH

Computer Science (Artificial Intelligence) Student | Data, AI and Technology

07506 711580 · umehmayac@gmail.com · mayaumeh.com · LinkedIn: Maya C. Umeh · github.com/MayaUmeh

PROFILE

Computer Science (AI) student at the University of Hertfordshire, predicted a First, who works with real data every week. In my part time role at Hertfordshire Students' Union I clean and analyse large survey datasets in Python and build the charts that go into stakeholder reports. I completed Bright Network's Internship Experience UK on the Data and AI track, and I have built an ESP32 IoT gate system and the core class hierarchy of a team Java application. Seeking a graduate role in technology, data or AI where I can keep building and learning fast.

PROJECTS

AI Safety Gridworlds | *Python, OOP, AI Safety* Apr 2026

- Built three **AI safety gridworld environments** in Python: safe interruptibility, avoiding side effects and reward gaming
- Built agents with a **reversibility check** and showed a **reward exploiting agent** farming reward without doing the task

Smart Gate Control System | *C++, ESP32, Wokwi, IoT* 2025

- Designed and built an **automated gate** using an ESP32, PIR motion sensor, pushbutton override and servo motor
- Simulated the full circuit in **Wokwi** first, then wrote the embedded C++ logic and refined it through structured debugging and testing
- Wrote a formal technical report covering design decisions, test cases and evaluation

Network Configuration Labs | *Cisco Packet Tracer, Linux* 2025

- Configured routed networks with **RIP, DHCP and VLANs** in Cisco Packet Tracer; scored **87%** on the assessed coursework
- Set up and configured an **Ubuntu Linux** virtual machine from scratch and documented every step and test result

Item Sharing Association Library System | *Java, OOP, Git, GitHub* Jan 2026 to Apr 2026

- Built the **core item class hierarchy** (abstract Item base class with Book, DVD and Magazine subclasses) that the rest of a four person team built on
- Used **inheritance and polymorphism** so new item types could be added without changing existing code

EDUCATION

University of Hertfordshire 2024 to 2027 (expected)

BSc (Hons) Computer Science (Artificial Intelligence) with Foundation Year | Hatfield, UK

- Predicted **First Class Honours**
- Relevant modules: AI Foundations, Software Engineering, Object Oriented Programming (Java), Operating Systems and Networks, Computing Things (IoT). Year 3: Robotics, AI Project
- Final year AI Project (planned): real time computer vision to detect post surgery pain in dogs from facial expressions

Nicholas Breakspear Catholic School 2021 to 2023

GCSEs including Mathematics (7) and English Language (6)

EXPERIENCE

Hertfordshire Students' Union 2025 to Present

Advice and Insights Assistant (part time) | Hatfield, UK

- Clean and prepare **large student survey datasets in Python**, fixing missing values, duplicates and inconsistent formats so the data can be trusted
- Analyse responses with **Python and Excel** (pivot tables, lookups) to find trends, and build the **charts and dashboards** used in stakeholder reports
- Handle **confidential student data** and a high volume of queries by phone, email and in person

Bright Network Jun 2026

Internship Experience UK: Data and AI track | Remote

- Validated and analysed a dataset of **5,000 telemetry readings** from offshore wind turbines in **Python**, flagging turbines that crossed temperature and vibration thresholds for maintenance
- Wrote a report presenting my findings and recommending a **real time data streaming approach** for monitoring turbine health

CERTIFICATIONS

Diploma in Data Analysis Fundamentals · Cyber Security Awareness Training · Microsoft Excel 2021 · VLOOKUP: Mastering Excel Formulas · Microsoft Access · Microsoft Office Suite *(Reed, Coursera)*

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL (basic)

Data and AI: Python data cleaning and analysis, data visualisation, AI safety concepts, AI assisted development (Claude), Excel (pivot tables, VLOOKUP)

Tools and Networking: Git, GitHub, Linux (Ubuntu), Cisco Packet Tracer, ESP32, Wokwi, Microsoft 365, TCP/IP, RIP, DHCP, VLANs

Full right to work in the UK. Open to relocating anywhere in the UK.
